

Abstract of the Disclosure

LANDSCAPE TILLER

An implement and method of assembly, wherein the implement comprises a housing having a first-side portion and a second-side portion, at least one element having a weight, the element being attached to the second-side portion of the housing and the weight of the element creating a moment arm, a shaft positioned between the first-side portion and second-side portion of the housing and operably coupled to at least one of the element, and a counterweight attached to the first-side portion of the housing, the counterweight offsetting the moment arm created by the weight of the element..
